

# Tubeling Planting Instructions

Remove  
Seedling  
from Tube

1. Choose an appropriate site for your seedling. Keep in mind its adult size.
2. Loosen the soil 18 inches across, 8 inches deep.
3. Clear a spot in the middle of the soil 2-3 times as wide as the tube.
4. Remove seedling from the tube by squeezing the sides. Recycle the tube or send it back to the NJ Forest Service.
5. Immediately place the seedling into the soil at the proper depth - root collar level with the surrounding ground.
6. Lightly pack the soil around the roots with your hands.
7. Mulch around the seedling.
8. Water regularly.
